EXPERIENCE

Full Stack Developer | Green Home Improvement (June 2025-Mar 2026)

- Implemented responsive design for both React-based Admin Portal and the React Native mobile application.
- Built reusable ReactNative components for mobile application maintaining design consistency across the app.
- Built a REST API for managing user invitation for the mobile application. Also develop an API sending user business card.
- Collaborated with developers in identifying and resolving critical bugs.

Full Stack Developer | Camillians Home Health Services (June 2025-Oct 2025)

- Contributed in developing modular, reusable components using Next.js ensuring design consistency and code scalability across the platform.
- Centralized user communication by building and deploying an integrated mail management system.
- Collaborated via GitHub with designers and developers to identify bottlenecks, refactor legacy code, and resolve critical UI/UX bugs.

Developer Intern | Davao Oriental State University (Feb 2025 – June 2025)

- Developed the hardware architecture for the Biophysical Ocean Buoy (BoB) using Arduino and ESP32; integrated specialized sensor modules to enable real-time water quality monitoring.
- Designed a custom 3D model for the Buoy’s chassis using CAD software and successfully executed the physical build via 3D printing, ensuring structural integrity for aquatic deployment.
- Collaborated with faculty in maintaining DOrSU Infratech website, updated the critical contents using CodeIgniter.
- Assisted with essential IT support tasks, including reformatting and peripheral deployment.

PROJECTS

Philippine Coleopterists Society (2025)

- Implemented responsive design using React framework for improved user experience.
- Build back-end API using NodeJS and ExpressJS for handling page data.

TransitMaster (2025)

- Collaborated and developed a hardware and web-based system for scheduling and tracking vehicles.
- Built a hardware device using ESP32 and integrated GPS and GSM modules for data transmission.
- Implemented Socket.io to the NodeJS back-end to handle real-time data transmission.

AceTrack Attendance System (2024)

- Contributed to the development of the ACES attendance system.
- Built REST API using ExpressJS and MySQL database for handling student attendance check-ins/checkout.
- Implemented role-based access control to handle page restrictions.

SKILLS

- | | |
|---|--|
| • Graphic Design | • Diagnosis and Troubleshooting of Hardware & Software |
| • UI/UX Design | • IOT & Embedded Systems |
| • Web Development | |
| • Operating System Installation & Configuration | |

EDUCATION

Bachelor of Science in Information Technology

June 2025

Davao Oriental State University
